Mon, 12 Mar 2018 16:34:00 GMT Barcodes and DNA Finger Prints Workshops - ISFG2017 - If you are a teacher searching for educational material, please visit PBS LearningMedia for a wide range of free digital resources spanning preschool through 12th grade.

GMT CDFD :: DNA - In Part 1 of this lesson, students learn the basics of DNA profiling, including the structure and inheritance of STRs. In Part 2, students learn how DNA profiles are compiled with STRs that are typically used in forensic investigations. In Part 3, they work through a case study involving a robbery ...

Fingerprinting - DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops, and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled round the same axis, and have the same pitch of 34 ÅngstrÅms (3.4 nanometres).

Thu, 09 Jun 2016 23:59:00 GMT DNA - cloning is the process of producing similar populations of genetically identical individuals that occurs in nature when organisms such as bacteria, insects, plants or animals reproduce asexually. Cloning in biotechnology refers to processes used to create copies of DNA fragments (molecular cloning), cells (cell cloning), or organisms (organism cloning).

Wikipedia - Name Class Date 15.2 Recombinant DNA Lesson Objectives Explain how scientists manipulate DNA. Describe the importance of recombinant DNA.

Sat, 10 Mar 2018 05:02:00 GMT DNA - cloning is the process of producing similar populations of genetically identical individuals that occurs in nature when organisms such as bacteria, insects, plants or animals reproduce asexually. Cloning in biotechnology refers to processes used to create copies of DNA fragments (molecular cloning), cells (cell cloning), or organisms (organism cloning).

15.1 Selective Breeding - CSI Wildlife engages students by combining elephants, species conservation, and forensics to teach key biological concepts and science practices. Explore actual cases (adapted to be approachable by students) in which scientists use DNA profiling to investigate the elephant poaching that supplies the ...

Wed, 14 Mar 2018 04:22:00 GMT DNA Profiling Activity | HHMI BioInteractive - In biology, cloning is the process of producing similar populations of genetically identical individuals that occurs in nature when organisms such as bacteria, insects, plants or animals reproduce asexually. Cloning in biotechnology refers to processes used to create copies of DNA fragments (molecular cloning), cells (cell cloning), or organisms (organism cloning).
