electrocardiography and cardiac  
drug pdf - Electrocardiography  
(ECG or EKG) is the process of  
recording the electrical activity of  
the heart over a period of time  
using electrodes placed on the  
skin. These electrodes detect the  
tiny electrical changes on the skin  
that arise from the heart muscle's  
electrophysiologic pattern of  
depolarizing and repolarizing  
during each heartbeat. It is a very  
commonly performed cardiology  
test. Sun, 11 Dec 2005 23:52:00

Event Monitors - Medical

Clinical Policy Bulletins ... - The  
human heart is situated in the  
middle mediastinum, at the level  
of thoracic vertebrae T5-T8. A  
double-membraned sac called the  
pericardium surrounds the heart  
and attaches to the mediastinum.  
The back surface of the heart lies  
near the vertebral column, and the  
front surface sits behind the  
sternum and rib cartilages. The  
upper part of the heart is the  
attachment point for several large
